Amendment of Astract

Abstract.

Heatball is a new field game, and board game. Heatball was created to be played, on foot, on skates, and wheelchairs. Heatball has two court designs, a round court with one basket in the center, and a oval court with two baskets in different areas of the court. Courts may have various dimensions and surfaces, such as concrete, ice, or wood. Players follow specific rules using a ball, baskets, ramps, and court symbols, with the objective of scoring points. Courts may have elevated areas throughout the court, and may have an elevated wall with a rail, along the outer edge of the court. The field game is played by two teams with four participants each, or three teams with three participants each. One team will play offense, this team will have possession of the ball, and will try to score by placing the ball through the basket, defensive teams will try to prevent scoring by preventing and blocking shots. Once a score has been obtained by a team, a race by two teams will determine who will have ball possession to play offense. The game is played with four 15 minutes quaters. Game is played until game time is expired, the team with highest amount of points will win the game. Specific rules, drawings, and symbols found on a Heatball court are explained in detail, in the section explaining rules formation and set up for Heatball. This game has great areobic exercise benefits, demands players stamina, agility and mental quickness, and does not require expensive equipment for the players to participate.
